VRINDA STORE
SALES DATA ANALYSIS PROJECT

Microsoft Excel | Interactive Sales Dashboard

PROJECT OVERVIEW

This project explores store sales and order data to understand sales performance, customer purchasing patterns, sales-channel contribution and order fulfilment. The analysis is presented through an interactive Excel dashboard.

PROJECT OBJECTIVE

To turn sales and order data into clear visual summaries that help a business monitor performance, compare customer segments and identify patterns that may need attention.

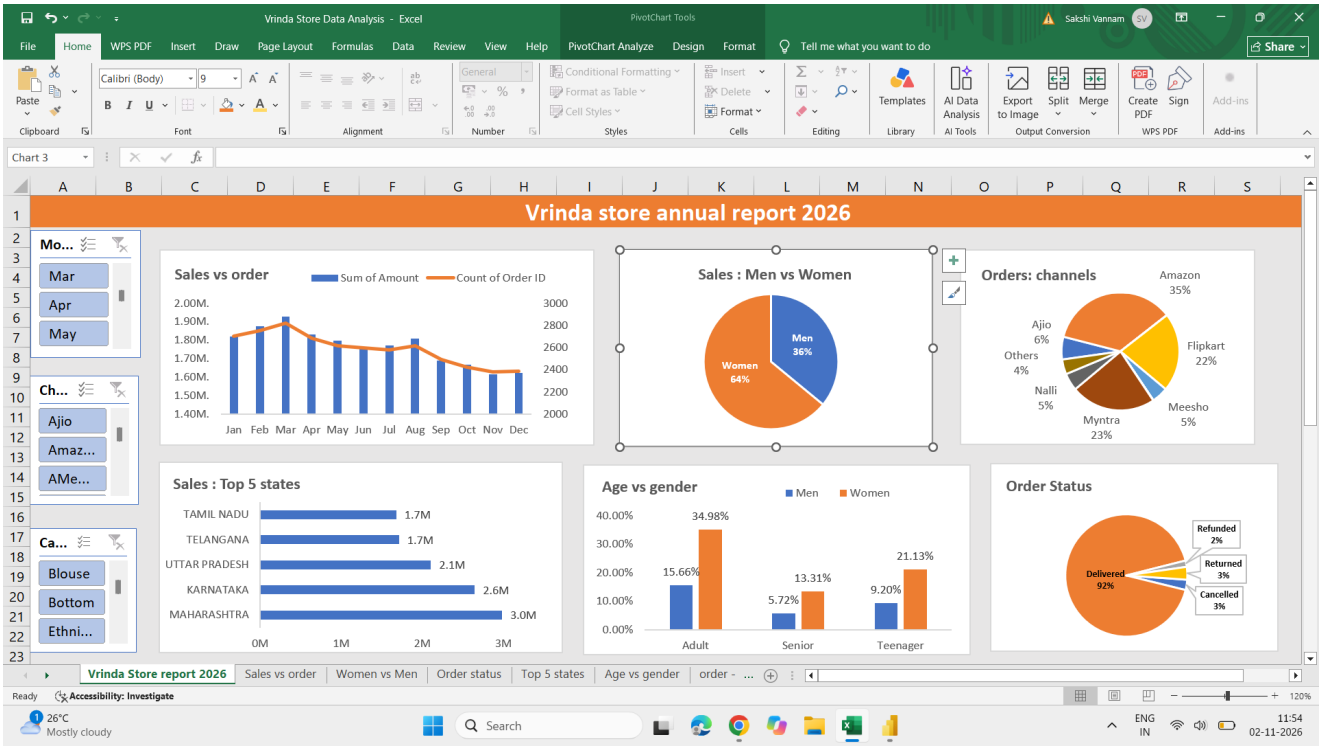

TOOLS & TECHNIQUES

Tool	Techniques demonstrated
Microsoft Excel	Data analysis and dashboard preparation
Pivot Tables & Pivot Charts	Summarising sales and order information
Charts & visualisation	Comparing monthly trends, categories and segments
Interactive slicers	Filtering the dashboard by available fields

Project work shown here is based on the dashboard in the accompanying Excel workbook.

DASHBOARD OVERVIEW

The dashboard brings together six views of store performance. The slicers on the left allow users to filter the displayed analysis.

Dashboard views: monthly sales and orders; sales by gender; order channels; top five states; age group by gender; and order status.

KEY OBSERVATIONS & BUSINESS QUESTIONS

The observations below are read from the dashboard screenshot. Verify the figures against the source workbook before publishing.

Area	Dashboard observation	Possible business question
Customer gender	Women account for 64% of sales; men account for 36%.	Which products or customer needs may explain the difference?
Sales channel	Amazon represents 35% of orders, followed by Myntra (28%) and Flipkart (22%).	How can the store maintain strong channels and improve lower-contributing ch
Geography	Maharashtra is highest among the five states shown (3.0M).	What products and campaigns are driving sales in the leading states?
Order status	92% of orders are marked delivered; returned and cancelled orders are 3% each, and refunds are 2%.	What are the reasons for returns, cancellations and refunds?
Age & gender	The chart compares adult, senior and teenager customer groups by gender.	Which customer segments could benefit from targeted marketing?

POTENTIAL BUSINESS RECOMMENDATIONS

- Review product and campaign performance for customer segments with higher sales contribution.
- Study channel-level order trends and customer feedback before allocating more marketing effort.
- Investigate return, cancellation and refund reasons to identify avoidable order issues.
- Compare monthly sales and order movements to understand seasonality and periods of stronger demand.

LEARNING OUTCOME

This project provided practical experience in summarising sales data, building Pivot Charts, using slicers and presenting findings in an interactive Excel dashboard. It also helped connect data visualisation with business questions and decision-making.

Important: The screenshot title reads “Vrinda store annual report 2026”. Ensure the year/title matches the dataset period in your workbook before publishing.
